

# INCIDENT ACTION PLAN

## Establishing Incident Objectives

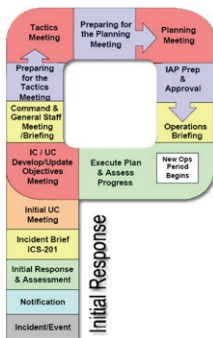

Determining the incident objectives and strategy is essential. Incident objectives should have SMART characteristics:

- **Specific** - Is the wording precise and unambiguous?
- **Measurable** - How will achievements be measured?
- **Action-Oriented** - Is an action verb used to describe expected accomplishments?
- **Realistic** - Is the outcome achievable with given available resources?
- **Time Sensitive** - What is the timeframe?

## Initial Scene Size-up

- What is the nature of the incident?
- How large is the affected area?
- What hazards are present?
- Are there any potential safety risks?
- Could the situation worsen suddenly? How?
- How can the area be secured?
- What initial resources are required?
- Is this likely to be a prolonged incident?
- Which location would make a good staging area?
- Which access/egress routes would assist the flow of response personnel and equipment?

## The Planning "P"

# INCIDENT ACTION PLAN

## Standard Response Goals

- Protect the safety and health of all responders
- Save lives and reduce suffering
- Protect public health
- Protect critical infrastructure
- Protect property
- Protect the environment
- Reduce economic and social losses

## Tactical Priorities

- Assess the scene and determine the hazards/threats faced
- Establish a perimeter identifying hazard zones
- Determine resource needs
- Stabilize the scene and ensure the safety of all involved
- Triage, treat, and transport the injured
- Evacuate those in harm's way
- Secure the scene for investigation
- Coordinate information distribution with the media
- Begin recovery operations
